

# **PROJECT WORK ON COVID INFO**

## **OBJECTIVE:**

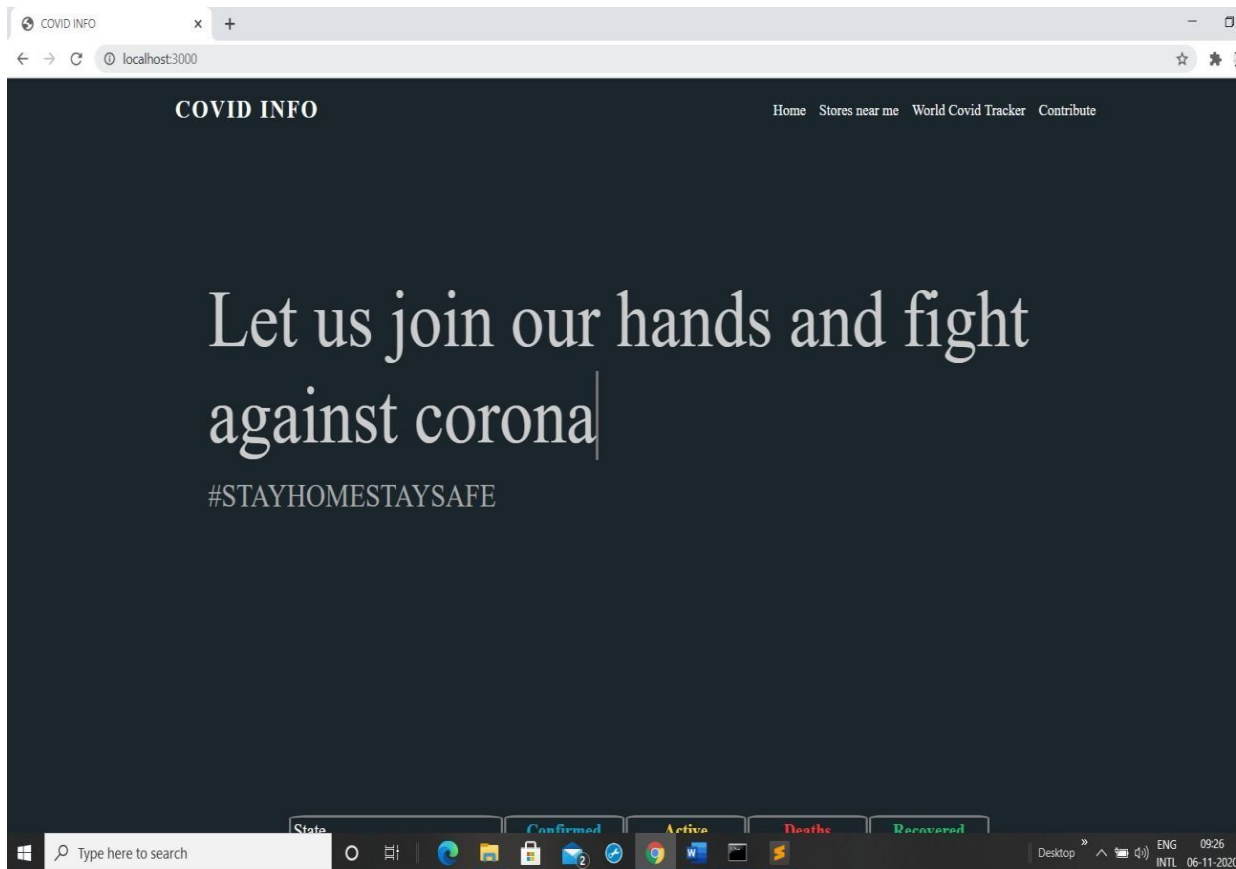

The aim of our project is to make a COVID-19 info website to aware people with accurate confirmed cases, deaths, recovered cases and other updates like Donation, Nearest Stores, Nearest NGO's Location related to coronavirus pandemic. The project use data from official world health organization server & Google.

## **ABSTRACT:**

Coronavirus was discovered due to detection of an unfamiliar pneumonia in a group of patients in December 2019 in Wuhan, China, initially named as 2019 novel coronavirus (2019-nCoV) by the World Health Organization (WHO) on 7 January. Researchers sequenced the genome of new virus and figured out 86.9% of the genome is the same as SARS-COV genome. Afterwards the name was changed to Severe Acute Respiratory Syndrome Corona Virus-2 (SARS-CoV-2). According to coronavirus disease 2019 (COVID-19) Situation

Report – 71 (Data as reported by 18:10 IST, 10 Sep. 2020)  
2,78,91,274 cases were globally confirmed and 9,04,192 persons died. These numbers are increasing day by day and changing in every instant. This paper presents an approach to make a website which shows all the statistical information about COVID19 cases worldwide.

## Homepage:

The screenshot shows the same web browser window, but the 'Confirmed' tab is now selected. The table displays the following data:

State	Confirmed	Active	Deaths	Recovered

### Brief information:

This is our home Page. In this page we use Html, CSS, Bootstrap, Javascript, JQuery, Json, Express.js, Node.js, MongoDB. At the top a navigation panel is there. We use Bootstrap Library for Animation .Later half of page showState wise Confirmed , Active ,Deaths, Recoveredcases .we use j query to fetch the data from COVID api.At bottom there is a survey form which collect the data from user and show the no of people have visited our website. We use MongoDB, Node.js for Backend Part. The data the user provide will be saved in Console in Command prompt.

### **COVID 19 Tracker(worldwide) webpage:**

Code used: HTML, CSS , javascript, Angular JS, J Query, Json

This is designated covid 19 tracker for all country .This Tracker will show the data of various countries in which people are affected by COVID 19. At top of this Webpage we used Node.js and ajax to run slideshare of image.We fetch the data from public api using J Query and Json.

## Screenshot:

### After entering country name (USA):

.animate-leave.animate-leave-active {
```

```
left:-100%;
```

```
}
```

```
.animate-enter.animate-enter-active,.animate-leave {
```

```
left:0;
```

```
}
```

## Conclusion:

Thus we have successfully made a COVID19 Info website using HTML, CSS , javascript, Angular JS, J Query, Json, node js and store the data in mongo database, Which can be used 1. To check the affected people in different states, 2.Finding stores nearby, 3.Covid tracker to track the records of covid19 worldwide and 4. To donate to the needy using PM care , 5. To contact nearby NGOs etc. Thus our website can help a large number of population in this pandemic situation to overcome it and getting help by this.
